

Title: MVP Enrollment VYVGART Hytrulo for Adults with CIDP	
Project Owner: Tanvi Lodhia	Date: 9.29.2025
Agency Contact(s): Emma Megan <emma.megan@mna.co>	

Purpose: This data on file packet is the reference for the following information: <i>Justification for using information that is unpublished? Please specify the business need?</i> The claim being presented is based on an average initiation rate among adult patients with CIDP prescribed VYVGART Hytrulo from June 2024 to January 2025, according to My VYVGART Path data. The goal is to share this information to increase the social proof that most patients who enroll in the MVP program start their treatment with VYVGART Hytrulo. The claim for approval: - 8/10 adult patients with CIDP who have enrolled in My VYVGART Path have started treatment with VYVGART Hytrulo.
Use(s): <i>Please describe the manner in which the following data will be utilized (e.g. single use, multiple assets, multiple agencies, etc.)</i> This will be integrated as an access or enrollment message in the core story across HCP core materials (website, iVA, leave behind, and CVA)

Content: <i>Specify Sources/ Original References</i> These data are taken from the My VYVGART Path patient support program and extracted from Artemis. All data is available in the Rx to Tx Velocity (%) – CIDP; All Products table available in the CIDP Conversion Velocity presentation from August 25th, 2025.

Sources (see Appendix): Artemis extracts as of 8/18/2025

* Immature data points (i.e., time period is still active for some enrollments in cohort)

CONFIDENTIAL. FOR INTERNAL USE ONLY.

Highest Cumulative % Conversion in Cohort Time Period

Data was collected from June 2024 to January 2025 and verified through discussions with Nurse Case Managers and reported in Artemis. Nurse Case Managers call patients 1-3 days after their scheduled start date to confirm that they have started treatment. If Nurse Case Managers are unable to reach the patient, they will continue to call until the start date can be confirmed. Data from Artemis was last extracted on 8/18/2025.

The first row, "Cohort enrollment" displays the number of adult patients enrolled in My VYVGART Path from June 2024 to January 2025 (e.g. 31 patients were enrolled in June 2024). The last row, "Total (including NON-Happy Path[†])", displays the percent of adult patients that started therapy on VYVGART Hytrulo since enrolling in their cohort.

The overall average initiation rate is calculated by taking the sum of all "Total (including NON-Happy Path)" figures and dividing them by the number of months (8) data was collected. An average of 81.4% of all adult patients enrolled in My VYVGART Path have started treatment with VYVGART Hytrulo since enrolling in their cohort.

* Immature data points (i.e., time period is still active for some enrollments in cohort)

Highlighted cells: Highest Cumulative % Conversion in Cohort Time Period

[†]NON-Happy Path refers to patients who started therapy prior to enrolling in the My VYVGART Path program.

Talking Points/Take-home Message:

List key talking points and/or describe how data will be characterized. For analyses, use below checkbox to ensure full requirements to set-up the results are met.

8/10 adult patients with CIDP who have enrolled in My VYVGART Path have started treatment with VYVGART Hytrulo*

"Based on data collected from adult patients with CIDP who enrolled in My VYVGART Path between June 2024 and January 2025 and reported starting treatment with VYVGART Hytrulo.

Checklist for additional requirements to appropriately describe analyses:

☐ Data Source
 ☐ Logic behind metric
 ☐ Business rules (xx months, xx population)
 ☐ Limitations of analysis
 ☐ HCP marketing will keep a list of how many and which pieces contain this message
 ☐ HCP marketing will monitor this claim monthly and update this claim annually
